SKILLS

Mobile & frontend

React Native · Expo · TypeScript · JavaScript · React · Vue · Next.js · Tailwind CSS · OWL · Zustand

Backend & data

Python · Odoo · Django · PostgreSQL · PostGIS · MySQL · Node.js · REST APIs · Rust

Infra & tooling

Linux · Docker · AWS (EC2, S3, IoT Core) · MQTT · nginx · Git · GitHub Actions · EAS Build · pre-commit

CERTIFICATIONS

Microsoft Certified Systems Engineer (MCSE)	2016
EC0160 Desarrollo de Código de Software	2022
Databases — IT Specialist	2023
Software Development — IT Specialist	2023
Desarrollo de Apps Móviles — Google	2022
Desarrollo Web II — Google	2022

LANGUAGES

Spanish	Native
English	Technical

01 PROFILE

Full stack developer with over ten years building software. I work inside the Odoo 19 framework fork behind a production ERP —ORM, OWL web client, infrastructure and CI— and ship complete products on my own: an app live on the App Store and an electronic medical record that installs and updates itself.

02 EXPERIENCE

Full Stack Developer

Aug 2025 — present

AgroMarin · Metepec, México

- 5,000+ commits across the framework and addons, including core: ORM, OWL web client, messaging, HTML editor and accounting. Many landed through AI-agent audit loops I designed (lint, guidelines, tests), each with its own reviewable PR
- Multi-company accounting flows: invoice and payment approvals before posting (also from Telegram), automatic entries and reconciliation, entry and payment templates, payroll CFDI, bank dispersion and customer credit
- Moved production from AWS to OVH: A/B deploys, pgBackRest backups in two regions plus restic, CrowdSec and Ansible provisioning
- odoo-rust-orm: a Rust reimplementation of the ORM read path, shadow-diffed against the Python ORM on the real database
- ERP files on object storage (S3) with a hybrid mode, and SSH-key login with no API keys (auth_unix_peer)
- Telegram as an operations surface: approvals, attendance and a bot that answers questions about ERP data, including the fleet's GPS location
- An MCP server so AI agents read and write the ERP with each user's own permissions
- Continuous GPS and industrial-sensor telemetry ingest on a job queue; diagnosed PostgreSQL concurrency contention under write bursts
- Production performance: slow-query profiling, execution plans, PostgreSQL tuning and worker sizing

Odoo 19 · Python 3.14 · PostgreSQL 18 · PostGIS · OWL · Contabilidad / CFDI · Rust · OVH · AWS · Ansible · MCP

Mobile Developer (React Native)

Jan 2026 — Jun 2026

Grupo Educativo Hidalgo · México · remote

- End-to-end design and development: architecture, navigation, interface and distributable binaries
- Six modules for parents: term grades, attendance history, announcements with read receipts, payment status and exit authorisations
- QR-code exit authorisations with a 15-minute expiry, designed for in-person validation at the school entrance
- Multi-student support: one guardian account manages several enrolled children
- Persistent sessions and global state with Zustand + AsyncStorage
- Android (APK) builds via EAS Build and the full App Store release cycle: signing, store listing and updates

React Native · TypeScript · Zustand · AsyncStorage · EAS Build · React Native SVG

Senior Full Stack Developer

Mar 2018 — Aug 2025

CECYTEM · Xonacatlán, México

- Designed and built the institutional enrolment system, streamlining registration for 2,000+ students per school year
- Google Apps Script automation integrating Classroom, Drive and Docs for academic workflows
- Developed and customised Odoo ERP (Enterprise) modules, including core bug fixes
- Led innovation projects: a sign-language interpreter with Python/AI, smart attendance and an institutional bot
- Institutional website, internal academic-management platform and educational robotics with Arduino

React · Vue · Django · Python · MySQL · Odoo · Google Apps Script · Arduino

Freelance Developer

Mar 2016 — Mar 2018

Freelance · Metepec, México

- Custom web applications with Python and Java back ends on MySQL
- Institutional and commercial sites with PHP and JavaScript
- Graphic design and branding for local clients

Python · Java · JavaScript · MySQL · PHP · Photoshop · Illustrator

Character production & post-production

Jan 2014 — Aug 2016

Ge Games · Toluca, México · remote

- 3D characters with Blender, Photoshop and Illustrator
- Interaction features programmed in C# inside Unity
- Music and video production for the game and its marketing

`Unity` `C#` `Blender` `Photoshop` `Illustrator`

03 — PROJECTS

AI agent swarm

2026 — now

A swarm of AI agents that works on the Odoo fork like an engineering team: some research, others implement, another model family reviews, and code decides what lands. Today it migrates business logic from Python to Rust and network services to Go; before that it shipped thousands of fixes and tests to the fork, always one reviewable PR per batch.

`Claude` `GPT` `Python` `Rust` `PyO3` `Go` `Git worktrees` `MCP`

App Grupo Educativo Hidalgo ↗

2026

The official app for parents and guardians. Live on the App Store under my own developer account: I designed it, built it and took it through Apple review myself.

`React Native` `TypeScript` `Zustand` `EAS Build` `iOS + Android`

Historial Clínico

2026

An electronic medical record for private practices: patients, history, consultations, printable prescriptions, lab studies and hospital stays. It runs on one office PC, opens from any machine on the network and installs from a self-updating .exe.

`Next.js 16` `TypeScript` `Prisma` `SQLite` `Electron` `Zod`

Accounting flows on Odoo 19

2025 — now

Modules that let the accounting of several companies run with as little manual work as possible: approvals before posting, entries that post themselves, Mexican CFDI and payroll, customer credit and bank dispersion.

`Odoo 19` `Python` `Contabilidad` `CFDI 4.0` `Nómina` `PostgreSQL`

Odoo Companion ↗

2026

Turns a company phone into an Odoo device: it sends location, call logs and recordings over token-authenticated REST, ships a SIP softphone and, since 2.1, scans or uploads documents and shows where they landed in Odoo.

`Kotlin` `Android` `Room` `WorkManager` `SIP` `Odoo REST`

Potato Debug

2026

An extension that toggles debug mode and assets in Odoo 19, with a record inspection panel. Born from a daily annoyance: never typing that URL by hand again.

`JavaScript` `Chrome Extension` `Odoo`

04 — EDUCATION

2020 — 2023 — **B.Sc. Business Informatics: Software Development**
Universidad Digital del Estado de México (UDEMEX)

2013 — 2016 — **Technician in Programming and Digital Animation**
CECyTEM — Metepec, Edo. Méx.
